V 120-2

Positive displacement internal gear pump

Indicative picture of the product

Product Data

Capacity
Up to 1.994 l/min

Pressure
Up to 8 bar

Viscosity
Up to 60.000 cSt
for standard versions

Temperature
Up to 300°C

Characteristics

The V Series internal gear volumetric pumps, standard versions, are designed to handle clean fluids (including abrasive fluids) with viscosity from 20 to 60.000 cSt. Higher viscosities can also be managed by V Series pumps with:
- accurate size selectio
- fluid-specific rotation speed adjustment
- clearances adjustments and specific construction

Designed for heavy and demanding duties, they are used in all industrial applications where gentle management of viscous, sensitive and challenging products is required. V Series rotary volumetric pumps ensure flow rates are proportional to the rotational speed and allow constant pulsation-free flows, regardless of the back pressure; setups with frequency variators ensure accurate and variable flow rates based on feedback signals coming from control devices (flow rate, pressure, mass, level, etc.). Volumetric rotary pumps with internal gears allow reversible rotation and different ports orientation, for maximum intallation versatility and flexibility.

Advantages

1. **Simple design**. Only two moving parts: rotor and idler gears, and only one shaft seal.
2. **Reliable, robust and built for long life.** Perfect handling of medium-high viscosity fluids, low peripheral speeds of the rotor, an external support with a large-sized roller bearing to support axial and radial loads in order to ensure a longer service life.
3. **Simple and minimal maintenance.** Inspections and adjustments can be carried out without removing the pump, piping or drive.
4. **Reversibility.** By inverting the direction of rotation the flow of liquid is reversed. Full performance is available in either direction of flow.
5. **Preheating.** Heating chambers cast around the casing or integrated in the cover and on the seal housing, allowing high viscosities accurate control.
6. **Constant flow.** directly proportional to the rotational speed and virtually independent of the pressure. Smooth pulsation-free flow, preveting pressure spikes which could cause vibrations in the pipework.
7. **Gentle handling of shear-sensitive fluids.** Thanks to low rotation speed and wider cavities between gear teeth, any alterations of viscous and sensitive products are avoided.

Applications *(some type of fluids)*

Resins, polymers
Polyurethane foams (isocyanate and polyol)
Glues, adhesives, sealants
Plastic materials, rubbers, compounds for coatings
Paints, inks, dyes and synthetic pigments
Soaps, surfactants, cleaning products
Bitumen, pitch, tar
Food production fluids such as molasses, dextrose, glycerin,lecithin, syrups, chocolate, peanut butter, vegetable oils, starches, animal feed, animal fats, pet food
Fertilizers
Lubricating fuel oils
Additives
Alcohols and solvents
Glycol

Certifications

ATEX 2014/34/EU
EC N. 1935 / 2004

TABLE 1 - SHAFT SEALING	
P	Packing gland
P1	Flushed packing gland. For ATEX pumps' versions, this option is mandatory and specifies a construction with a thermocouple well (no flushing).
P...-RAD	Lip Ring Seal (only sizes up to V 100-2 included) - Contact factory for availability of combinations with ATEX versions (A - AD) - Not available.
T4 (T6)	UNI EN 12756 standard dimension mechanical seal. Graphite/ceramic with PTFE gaskets. A PTFE lip seal is mounted behind the main seal to contain a barrier liquid (Quench). On request, a quench liquid reservoir (+O2). For the V 25-2 and V 30-2, the denomination is T5
T4W (T6W)	UNI EN 12756 standard dimension mechanical seal. Tungsten or silicon carbide/ceramic with PTFE gaskets. A PTFE lip seal is mounted behind the main seal to contain a barrier liquid (Quench). On request, a quench liquid reservoir (+O2) can be supplied. For the V 25-2 and V 30-2, the denomination is T5W.
T7*	Double tandem mechanical seal (not available on V 25-2 and V 30-2)
T8*	Double back-to-back mechanical seal

* The seal materials and lubrication system are decided on case by case depending on the chemical and physical characteristics of the liquids

TABLE 2 - MATERIAL	
No key	Cast iron with bronze bushes. For lubricating and non lubricating liquids
G	Cast iron construction with cast iron bushes. For lubricant and non-lubricant fluids.
BS	Cast iron with graphite bushes. Tight tolerances. Idler with special antigalling treatment. AISI 329 or SAF 2205 steel shaft and idler pin. Suitable for all types of solvents, including chlorinated solvents, which do not corrode cast iron
HT	In ductile iron with internal bronze bushes for circulating heat transfer oil up to +300°C.
HTR	Ductil cast iron construction with bronze bushes for the circulation of fluids up to +300°C. Construction suitable for hot bitumen, tar, and pitch. Heating jacket formed by casting around the pump casing. Not available.
K	CF-8M Construction (stainless steel AISI 316) - Not available.
AW	Hardened steel construction - Not available.

TABLE 3 - EXECUTIONS	
A - AD	ATEX version; A = gas; AD = gas and dust (for pumps with mechanical seal, the +O2 barrier fluid containment tank is included)
+FR	EN 1092 type B flanges on suction and discharge ports (inquire for availability on other connections).
+FA	ANSI 125/150 FF flanges on suction and discharge ports (inquire for availability on other connections).
+FAR	ANSI 125/150 RF flanges on suction and discharge ports (inquire for availability on other connections).
+R1	Heating jacket on the seal box (not available for ATEX pumps; not available with accessory +O2).
+R2	Heating (or cooling) jacket on the cover
+R4	Combination of +R1 and +R2 (not available for ATEX pumps; not available with accessory +O2).
+B	Bronze bushes (where not present on standard version)
+W	Mechanical seal static face in tungsten carbide or silicon carbide (see table 1 - T4 - T4W - T6 - T6W).
+QPQ	Hardened components
+X	Special construction (as specified on the product offer)

TABLE 4 - OPTIONALS	
+O2	With quench liquid reservoir (included for ATEX pumps)
+O2X	Pressure vessel for double mechanical seals ST8 (API PLAN 53A - Refer to specific documents)
+Y	Pressure relief valve - Calibration for standard pressures (from 1 to 6 bar).
+YH	High-pressure relief valve - Calibration for high pressures (from 7 to 11 bar).
+PT	Thermowell for ATEX pump (to be evaluated for ATEX version as indicated in the manual)
+TC	Thermocouple for ATEX pump (to be evaluated for ATEX version as indicated in the manual)
+X	Special construction (possible additional description in specific document)

*The use of some types of variants and accessories excludes others; if in doubt, contact the office.
